The Value of Working with PSA Certified

Build Confidence by Confidently Meeting Security Demands
Stay Ahead of the Curve with Security Best Practice

The increasing deployment of connected devices is creating unprecedented opportunities for innovation and growth across all industries. However, the potential value connected devices bring is undermined by their inherent susceptibility to cyber-attacks, which makes it crucial to develop a strong security foundation. The PSA Certified ecosystem is helping businesses meet the rising security demands by establishing a universal baseline of security requirements.

By building digital transformation on strong security foundations, businesses can drive development efficiency, improve competitive advantage, and secure customer trust. PSA Certified has scaled to become one of the fastest growing, most valued security ecosystems, globally, and continues to evolve, leading the cross-industry collaboration required to unleash the full potential of the connected future.

Establish a Baseline for Security Standards

PSA Certified has been adopted as a reference security standard in a broad spectrum of industries, including:

- Automotive: improving supply chain security, improving safety, and visibility
- Construction: improving productivity, improving operations, reducing costs in construction projects
- Edge devices: providing a strong, secure foundation for AI
- Retail: improving consumer trust, improving new retail possibilities, and taking advantage of many new retail opportunities
- Smart buildings: ensuring the safety of buildings, reducing exposure to risks, and saving costs in buildings
- Smart cities: ensuring the safety of city environments, reducing exposure to risks, and improving visibility
- Smart homes: improving supply chain security, improving safety, and improving productivity
- Smart industries: providing a strong, secure foundation for industrial automation
- Smart retail: improving supply chain security, improving safety, and improving productivity
- IoT devices: improving supply chain security, improving safety, and improving productivity
- Sensors & Actuators: improving supply chain security, improving safety, and improving productivity
